PCES Overview

VDOT's Project Cost Estimating System (PCES) is designed to:

- Collect and store cost estimates for specific projects in the Six Year Improvement Plan (SYIP) and the Secondary Six Year Improvement Plan (SSIP).
- Enable project managers to generate, update, and view project cost estimates for projects that have been scoped.
- Import cost estimates from Preconstruction, as well as allows for manual entry of costs.

<i>Note:</i> Warehouse and some data fields throughout the system are automatic	ata
	ıtically
populated by pre-existing data or as soon as UPC numbers are ass	signed. For
example, any VDOT project with a UPC number will appear in the	e system as a
POOL project within the purview of a VDOT district, whether or n	ot it has been
assigned to a project manager once created in POOL the UPC will	l show a
POOL estimate in PCES in the Pre-Scoping phase.	

Mandatory PCES usage by Project Managers

VDOT's Project Managers (PM) are responsible for entering and updating project cost estimates in PCES and managing the resulting budgets for their projects. All project cost estimates must be reviewed and updated by the PM at every project milestone. Project Managers decide, based on input from supporting VDOT divisions, when Preconstruction should be selected for the cost estimates, with the exception of the Final Submission cost estimate. Before selecting Preconstruction make sure that all portions of the estimate have been included (bridge, drainage, traffic etc.) and a prime project identifier has been created for the project. PCES estimates should not be "forced" to match Preconstruction figures. Final submission cost estimates should always be based on the fully detailed Preconstruction construction estimate. If there is a wide gap in the cost figures between PCES and Preconstruction before advertisement; the PM should determine and document the reason for the variance and adjust his/her recommended project estimate accordingly. When Preconstruction is selected as the estimate source PCES data will still be accessible by choosing PCES on the Summary page of the workbook.

It is critical to VDOT's project management program that the PCES program is fully understood and utilized thoroughly and correctly. PCES is not a complementary or supplementary program. Rather, it is an integral component VDOT's project management program - providing a central repository of project cost data for budgeting and funding purposes, as well as tracking projects and managing information needed for an efficient and cost effective construction program.

1

Sensitive and Confidential Information

All PCES program rights as well as the data contained within and linked to and are the exclusive property of VDOT. In addition, due to the sensitive and confidential budgetary and cost estimate information contained in PCES, access to the information contained in PCES is intentionally and specifically limited to VDOT employees and local government employees and representatives granted access to the system by VDOT.

Use of the system implies that the user will safeguard the information to the advantage of VDOT and its local government partners.

PCES Assistance

The Construction Division is responsible for maintaining and updating PCES. Comments/questions regarding the utilization and performance of PCES may be addressed to Corey Bourne at (804) 786-2538.

Local government users with access problems may call the IT Help Desk at 1(866) 637-8482 for assistance.

User Access and Rights

Any person listed with an e-mail address on VDOT's intranet should be able to access PCES. VDOT users may access the system via the VDOT intranet at: http://isyp/scoping/ces_search.asp.

Local government users may access the system via an external access portal at: <u>https://ss/vpn.vita.virginia.gov/vdot</u>.

Access by local government users requires issuance of a user name and password by VDOT's Information Technology Division, each time the user accesses the system.

To enter, upload, approve, or change project information in PCES, a training class must be attended by the user prior to being granted additional "user" rights. These users are either assigned as project managers on specific projects and/or assigned an "Estimator Level" on a district-by-district basis which allows the user to modify the project information. VDOT users must fill out form ITD-35A (Appendix A) requesting permission for PCES User rights and the level desired. They also must request access from their PM through SARA when seeking permissions higher then Guest or Estimator. External (local government users) must fill out form ITD-35E (Appendix B).

Header

The top of the Project List page is the header:

Figure 1: Project List Header

- Clicking the VDOT logo will take the user to the official external VDOT web-site.
- Clicking on the **Project Cost Estimating System** link of the header will take the user to the main page of the application (the project list).
- Clicking on **IT Support** link will not work contact Corey Bourne at (804) 786-2538.
- Clicking on the **User's Guide** link will route user to the most current version of this manual.
- Clicking on the **About** link will list version information about this application.

Initial Screen

The initial screen lists available projects and allows the user to limit the list by use of filter or search criteria.

The initial page of PCES is the Project Search screen. From here, you can locate any project within the system using the filters and search criteria at the top of the page.

The search results show the information about the State Project number, Description, Route, UPC, District, Project Manager, and estimate source.

The project filters include the standard District, Counties, Residencies, Cities/Towns, Road System, project status, projects and roles.

The system also has filters by Project and Role.

Project Status	Description
All Projects	All projects
Development	Projects under development (status code < 30) (default)
SYP	Projects included in the Six-Year Program
Construction	Projects under construction
Non CN	(future use)
Expired Est.	Provides a listing of expired est. based on business rules
24 month ad	Projects in the 24 month ad window
3 year STIP	Projects in the FHWA required State Transportation Improvement Plan

In addition, the project list can be reduced down using the Projects/Roles filters.

Table 2: Roles filter options:

Filter		Description	Description						
All Roles		All Roles							
Approver		Projects where yo	ou are the indivi	dual assigned	to approve an esti	mate			
Project Manager Projects where you are the assigned Project Manager (PM)									
Contact		Projects where you are a contact							
The search crit	The search criteria include Route/State project number/UPC Code.								
<i>UPC is the identification number that the Cardinal system assigns to projects.</i> <i>This number is used across the enterprise to identify projects. It is unique to the project, and will never be assigned to any other project.</i>									
Route		State Proj. #		UPC		Search Reset			
Description		Project Manager	All	~	Estimate Source	All			
		Figure	2: PCES Sear	ch Criteria					

You may search by Route number, State Project number, or UPC code by entering data in the appropriate fields, and press the Search to view the result. Clicking the Reset will clear all entries from the search fields.

Project Search Results

The next part of the page is the Projects Search Results, comprised of a, Totals Bar, Listing, and Page Navigation.

Figure 6: Project Search Screen - selecting the project

The following details are displayed:

State Project #
Description A textual narrative briefly describing the project (for quick identification and reference purposes)
Route The Route number of the road where the project will take place. This value is used in determining the state project number.
UPC The identification numbers the FMSII system assigns to projects. This number is used across the enterprise to identify projects. It is unique to the project, and will never be assigned to any other project.
District The primary construction district responsible for a project.
Project Mgr The person named to be responsible for the management of the project
Estimate Date Date estimate was selected
Version (Source) PCES version or system previous to PCES
Total Estimate A dollar amount representing the total PE, RW and CN amounts needed to complete the project.

You may export the results of the search to MS Excel by clicking on \bowtie to the right of the search bar. A dialog box similar to the one below will appear.

Figure 7: Export to MS Excel Select

Open, Save or Cancel as appropriate.

Page Navigation

Long lists of projects are broken up into pages to make it easier for the user to browse. Below the project list is a paging control which will allow the user to navigate through the project result set.

Change Project Manager

Users with Administrator rights can assign the Project Manager from the Project Information screen. To change the Project Manager do the following:

- 1. Press the Select Manager
- 2. Find the person from the list of VDOT employees by navigating through the list or by entering a name in the Name search field at the top of the page, and

Figure 17: Change Project Manager

3. Click on the row to select and assign the Project Manager.

Location

Location as the name implies, provides project location related information.

Location	
District	Lynchburg
Residency	Appomattox
County	Campbell
County Priority	NA
Road System	Primary
Route	0029
Road Name	
Start Location	0.139 MILE SOUTH EXISTING ROUTE 460 (ECL LYNCHBURG)
End Location	0.354 MILE NORTH EXISTING ROUTE 460 (NCL LYNCHBURG)
Length (mi.)	0.49

Figure 18: Project Information – Location

DistrictThe primary construction district responsible for a project

ResidencyThe VDOT Residency, in whose jurisdiction the project takes place

- County Priority......From Project Pool
- Road SystemDrop down division of funding groups e.g. primary, urban, secondary, etc
- RouteThe Route number of the road where the project will take place. This value is used in determining the state project number
- Road Name.....Street Name from Project Pool

Start LocationDescription of the physical starting point for the project

End LocationDescription of the physical end point for the project

Length A measurement expressing the distance between the starting point (From Location) to the finish point (To Location) (Miles, Kilometers, Feet, Meters, etc.)

This date must be the same as the Pool – CN Start date, and the same as the Schedule – planned end date for Activity 80 unless an actual end date exists. If an actual end date for Activity 80 exists, then this date becomes the ad date.

Project Estimates Tab

Selecting Cost estimate figures by Project Managers

Note:	PCES estimates should not be "forced" to match Preconstruction figures. If before advertisement there is a wide gap (greater than 20%) in the cost figures between PCES and Preconstruction, the Project Manager should determine and document the reason for the variance and adjust his/her recommended project estimate accordinaly
	estimate accordingly.

M Warning:	Before selecting PCES as estimate source, all applicable tabs of f the PCES estimate workbook must be fully completed. If Preconstruction is then selected, PCES data will still be accessible by selecting PCES on the Summary Page.

Project Estimates has project specific information grouped in the categories:

PCES User Manual

Project Summary Estimates Preconstruction Estimates Pending Approval Estimate Supporting Documents PD-1 Funding and Authorizations

Project Summary

Project Summa	iry 4						
UPC	52338						
Description	RTE 64 - UPGRADE SEWER SYSTEM - PE ONLY WB REST AREA						
State Project #	State Project # 0064-002-F07						
	Figure 20: Project Estimates – Summary						
UPC							
Description	A textual narrative briefly describing the project (for quick identification and reference purposes)						
State Project # XXXX-XXX-2	The state project number is 10 alphanumeric characters long, with a format of XXX (Route, County/City, Section).						

Estimates

Estimates section is divided into four areas:

Menu bar PCES Estimates List Preconstruction Estimates

Menu Bar

Estimate History

Clicking the Estimate History button will open up a window listing worksheets.

<i>Note:</i> All estimate workbooks (MS Excel format) entered by Project Management placed in the project's "Estimate History" files. These estimates cannot be changed. They are for read only.	are
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

Figure 22: Estimate History list

Download Blank Estimate

Clicking a Download Blank Estimate will download a blank worksheet pre-populated with some project information.

Figure 23: Download Blank Estimate

The alternate RW/Utility work sheets can be downloaded by checking use alternate R/W Utility worksheet when you download a workbook.

Select PCNs to use for Preconstruction estimate. Default is all PCNs and current coding requires a "prime" project be build in Preconstruction before any estimate can be imported.

Upload Estimate

Warning:	Before a new project estimate is uploaded for recommendation, the Project Manager needs to consider whether or not the funding for the project is adequate. If the project phase is within the 36 month advertisement window, and the total estimate is greater than \$50,000 or 10% the user uploading the estimate will be immediately routed to the Project Pool to create a PD-1.

The PD-1 Process should work like the following:

- 1. An estimate is uploaded into PCES.
- 2. The estimate is 'selected'
- 3. The system automatically approves the change.
- 4. If the estimate change is under \$50,000 or 10% threshold plus or minus then no three step process is required.

- 5. If the estimate is over the \$50,000 or 10% threshold then POOL requires a three step process on why the funding is needed, what UPC the funding is coming from, and if the CTB needs notifying.
- 6. Once the PD-1 is generated, submitted and approved, the recommended estimate becomes the approved estimate.

If for any reason the PD-1 is not generated because it was blocked (or if there was a bug) or if the PD-1 is never submitted, or if it is deleted before being submitted, the new estimate is allowed to be selected, but it is not approved.

The key event in PCES is the selection of the estimate, whether it is a new estimate or an existing estimate. That is what is supposed to drive the PD-1 generation. If it is not happening, or happening intermittently, then there may be a problem.

PD-1 section contains Status List and PD-1 detail information.

Status	Request Date	Requested By	
Rejected	12-05-2006	Steven.McNeely	6
New	12-18-2006	Franklin.Shue	6

Figure 35: PD-1 Status List

To view a printable version of the PD-1, click on \bigoplus on the right side of screen.

Note:The PD-1 area, when expanded, automatically includes the Project Manager's
"Selected" or "Recommended" Estimate. If the Project Manager's
Recommended Estimate has triggered a PD-1 in the Pool, the status of the PD-1
will be listed. If a PD-1 or other revision request is pending approval in the
Pool, no changes can be made to the Recommended Estimate until the PD-1 or
other revision request is approved or rejected.

Project Award

Once a project is awarded and entered into Site Manager it is the responsibility of the Project Manager or Area Construction Engineer to enter the Award date and Award amount in POOL. This process will initiate the E or edit button in PCES. The PM or ACE will choose manual next to CN and enter the actual Award amount. Choose submit and this becomes the estimate of record. The estimate can then be updated in the same manner while the project is under construction. Work orders and any other estimate changes must be entered here until the project is closed out.

Project Award

Project Closeout

The final stage of a PCES estimate is project closeout. Once a project has reached an end where there are no more charges anticipated, the ACE or PM must select the estimate and choose Expenditures.

Since the project is completed and "Expenditures" is the recommended estimate, please select expenditures using this process included in the "Project Closeout" section on page 31 of the PCES User Manual:

- 1. Find the project in PCES; click "Select Estimate."
- 2. To select Expenditures as the Recommended Estimate, on the Expenditures line, select the "E" button.
- 3. A new window should open and then from the dropdown select Expenditures for the phase(s) you are updating. Include any documentation in the Comment block and click "Submit." 4. Then click "Select." Be sure the check mark is beside Expenditures.

Also, don't forget to check the project in Cardinal to be sure it's closed to charges. If it is still open, contact CO Programming Openings and Closings.

PCES Worksheets

Objective

The purpose of the Project Cost Estimating System or PCES is to collect data for a specific project and, based on the data entered; determine a budget for that project. This budget is to be used for the Six Year Plan (SYP) until a detailed estimate can be generated using actual project quantities and unit prices. PCES is a budgeting tool not a detailed project estimate! The data entered needs to be based on a good project scoping. Think of PCES as a budget placeholder until such time a detailed estimate can be created. The following information about the individual worksheets is based on PCES version 7.1.

Project Budgeting Considerations

Persons assigned to manage projects are responsible for maintaining the project budgets for those projects. Project estimates should be reviewed and updated every 90 days or at every project milestone, whichever is less. It will be the project manager's discretion, based on input from other divisions, when Preconstruction should be the selected estimate with the exception of the Final Submission stage. Final Submission estimates should use Preconstruction as the source for the construction estimate. Before selecting Preconstruction, make sure all portions of the estimate have been included (i.e. bridge, drainage, traffic, etc. for Preconstruction and right of way and utilities). Once Preconstruction is selected, it will override the data in PCES.

PCES Contacts

The Construction Division has been assigned the responsibility of maintaining and updating PCES. Anyone having comments/questions about PCES can contact Corey Bourne at (804) 7862538.

Summary Worksheet

The purpose of the Summary worksheet is to summarize the costs of each phase of the project (construction, right of way & utilities, and preliminary engineering). In addition, it provides the reviewer with other essential information such as District, Project number, UPC number, and project manager. These fields are automatically populated from other systems and cannot be changed. The Estimate Year is automatically populated but the AD year and Construction End Year can be changed. These "Years" are based on the State Fiscal Year. If the project has an advertisement date of March 2014, the fiscal year is FY2015. If the project has an advertisement date of October 2014, the fiscal year is FY2015. Inflation is added to the AD year as well as the Construction End year. Construction End year inflation is calculated when a project is under construction for more than two years.

1

It is recommended the advertisement year is not to be changed and uploaded onto the website until a schedule change is approved

DISTRICT	DISTRICT FREDERICKSBURG				
PROJECT NUMBER	000-000-115				
CONSTRUCTION END YEAR	FY2018	UPC	12345		
AD YEAR	FY2015	BATE OF BATE OF BATE AT TO AD	1.80%		
ESTIMATE YEAR	FY2014	INFLATION NATE	2.96%		

Figure 38: Summary Worksheet - Summary Tab

There are four estimate fields on the summary sheet - preliminary engineering, construction, right of way, and utilities. The project manager can select the appropriate estimate source to use for each field.

The preliminary engineering field has two data sources to select from, **MANUAL** which will collect the data from the Manual worksheet in PCES, and **PCES** which will use the data created in the **CONSTRUCTION-1 and 2 and Bridge Web Application** for preliminary engineering.

Utilities Estimate:	PCES
H + H DRAFT SUMMARY (CONST / CONST-1 / CONST-2 / CO	DNST-MISC / BRIDGE / RW / UTIL / COMMENTS /

The construction field has three data sources in which to choose estimates - Manual, PCES, and TRNS*PORT.

Manual will collect the data from the Manual worksheet in PCES. If **PCES** is selected it will use the data entered in the **CONSTRUCTION-1 and 2 worksheet** and **Bridge Web Application** in PCES. When **Preconstruction** is the selected source, PCES will compute the construction estimate based on the total of the bid items plus the contingency in Preconstruction (usually 10%). The Construction Engineering estimate (CEI) will come in from your Preconstruction estimate. This can be a % of Construction or a Lump Sum.

Construction Worksheet

This worksheet summarizes all cost information from the **Constr.1**, **Constr.2**, and **Misc. Constr.** worksheets. Its table format is self-explanatory.

At the bottom of this sheet the total Construction Estimate and Total Preliminary Engineering Estimate are summarized. These are the same numbers that are reported on the Summary Worksheet.

Constr.1, Constr.2, and Misc. Constr. Worksheet

The purpose of the construction worksheet is to collect data about the project to determine the road construction estimate. Some data fields are automatically populated based on data PCES has collected from other systems such as iPM, iSYP, or Project Pool while other fields need data entered by the project manager/designer. A brief explanation of each field is provided below.

Project / UPC

Automatically populated from other sources.

Version: 7.1 Date: 1/1/2018

Interstate Project

Project Manager must select yes or no. This cell may be yes even if the roadway will not carry an Interstate designation. If physical features of construction mimic Interstate design standards (i.e. limited access grade separated interchanges etc.) the interstate standard should be selected.

Maintenance Project

Maintenance Project is selected when a project such as emergency contract is entered into PCES but is only in the system for a short period of time. Selecting Maintenance removes any estimate year inflation on that project.

Route Number

Project Manager must populate the fields.

			UPC: ****				
	Project Cost Estimatin	Project Cost Estimating System					
•	CONSTRUCTION / BRI	CONSTRUCTION / BRIDGE / PE					
	Project No. ** MISS	ING DATA **	Output (Ender Date into All Annihabilia				
	Interstate Project ?	*	Select / Enter Data Into All Applicable				
	Maintenance Project ?	*	White Boxes (in order from Top to Bottom)				
	Route Number	*					

Geometric Standard

Uses the roadway geometric standard selected to; determine the lane mile cost of the project. Consists of the nine geometric standards (Interstate, GS-1 to GS-8) found in the Road Design Manual. This block has a drop-down menu to allow the project manager/designer to select the appropriate Geometric Standard for the project.

Ad Date

This will automatically populated from the FY advertisement year shown on the PCES Summary worksheet. It is used to determine the inflation for the project. The ad date shown is the Fiscal Year the project will go to advertisement. For projects with unscheduled construction, the Project Manager should select an advertisement year based on funding and other applicable constraints. This Ad Date will be used to determine the number years to inflate the construction estimate.

Project Terrain

This feature allows the project manager/designer to select the appropriate terrain for the project through a drop-down menu. In addition to the standard level (flat), rolling, light mountainous and mountainous terrain options found in the Road Design Manual, this feature includes gently rolling and light mountainous. Rolling terrain is the base cost factor and will automatically default to this if no terrain is selected.

Design Year ADT or Current (Recent) ADT

If no design year ADT is available, the project manager/designer can manually enter current ADT for the project. Data entered into either of these fields will determine the defaults for design speed and lane width.

Number of Additional Lanes & Length of Additional Lanes (mi.)

The project manager/designer can enter additional lane information and the length in these fields for the two-lane, four-lane, and ramps & loops. For the two-lane and ramps & loops, the project manager/designer can only select one additional lane. For the four-lane, the project manager/designer can select up to four additional lanes. The length is to be entered in miles. The length of additional lanes is used to multiply by the total number of additional lanes selected. See additional lane illustrations below for two-lane, four-lane and ramps & loops choices.

Note: The additional lane costs are not adequate for stand-alone projects. These costs are to be used in conjunction with Adding or Building 2 or 4-lanes and ramps & loops.

Median Type – Graded, Raised, or None

The project manager/designer should always select the type of median being used for the project. The project manager/designer shall select the appropriate type of median from the pull down menu. Also, when raised median is selected the user should populate for the total length of median.

Number of Crossovers (Divided Highways Only)

This box prompts the project manager/designer for the number of crossovers needed for the project. This cost is averaging the cost of two left turn lanes plus the cost of the crossover. The left turn lanes on a cross-over are not to be included as normal left turn lanes in the workbook.

Cost of Large Drainage Structures (\$)

This field is to capture the lump sum cost of large drainage structures. The "per mile" cost of roadway has captured the "average" drainage cost. This lump sum cost should include drainage structures in excess of 60-inches in diameter. This includes drainage structures requiring a separate project number (i.e. D-601). These costs should include pay items associated with the drainage structure (i.e. bedding material, minor structure excavation, endwalls, headwalls, etc.). The project manager/designer should communicate with the drainage engineer/designer to collect any additional and unusual drainage costs. Good engineering judgment is to be used in determining if drainage costs should be included in the "per mile" roadway cost or added to the **Large Drainage Structures** lump sum cost. Documentation of large drainage costs should be

PCES User Manual

addressed on the **Comments** worksheet or uploaded to the PCES website as supporting documentation. (This is captured under the Misc. Const. tab)

In-Plan Utility Costs

In-plan utility costs can be captured and shown on the **Construction** worksheet two ways. The first is to have the utility engineer complete the **Utilities** worksheet in PCES. PCES should be the data source selected on the **Summary** worksheet. The other is to select RUMS on the **Summary** worksheet as the data source <u>if</u> Right of Way estimate has been completed and entered into RUMS.

H . H DRAFT / SUMMARY / CONST) CONST-1 / CONST-2 / CONST-MISC / BRIDGE / RW / UTIL / COMMENTS	; / ·

Adjustment for Unusual Construction Costs (\$)

The lump sum for unusual construction costs shall include any unusual cost not associated with a typical roadway project. These costs can include but are not limited to landscaping items, bicycle facilities, retaining walls, wetland mitigation sites, excessive excavation costs, high number of entrances, and in-plan utilities cost (if not already included). Documentation of unusual construction costs should be addressed on the **Comments** worksheet or uploaded to the PCES website as supporting documentation.

(This is captured under the Misc. Const. tab)

See appendix A page 44 for current (2014) unit cost to use for "unusual construction cost."

Additional (or Unusual) P.E. Cost (\$)

The preliminary engineering cost computed by PCES is based on a percentage of the construction cost associated with the Construction/PE worksheet. Project manager/designer should review this percentage for accuracy and take into consideration P.E. expenditures to-date (FMS II) and any unusual design work needed and will be charged to preliminary engineering. Again, good engineering judgment should be applied and documentation provided on the Comments worksheet or uploaded to the PCES website as supporting documentation.

Base Estimate #1

A total of the roadway construction costs in PCES based on current cost factors. (When Preconstruction is the recommended estimate source the estimate includes line items plus any contingency specified in Preconstruction) but not construction engineering (CE).

Base Estimate #2

Same information as Base #1, as reported on Const.-2 tab.

Note:	The function of the Const-2 worksheet is exactly the same as the Const-1 worksheet. The purpose of the Const-2 worksheet is to allow a user to estimate
	two different roadway sections on one project.

"Enter Const. CE Cost"

This field enables a user to specify an amount for CE. This field can be populated when using PCES or Preconstruction as the estimate source. The amount enforced here will over ride any value from PCES or Preconstruction.

CE (%)

This field will show CE cost calculated by PCES or on the CE amount in the Preconstruction estimate when Preconstruction is selected as the estimate source on the summary page of the workbook.

	Base #1 (PCES)	\$54,590
	Base #2	\$0
	Enter Const CE Cost >

Bridge Web Based Application

PCES version 7.1 allows for the project manager/designer to enter data in the Bridge Web Based Application. A square foot cost has been developed based on actual bids of closed-out projects. A separate spreadsheet is not needed to be downloaded from the PCES website under the UPC selected for each bridge but a spreadsheet is still available for external PCES users so they can still get scoping cost for bridge. The Web Based Application is currently unavailable for use by the external user. The new PCES workbook no longer has a bridge tab where costs can be entered. A bridge engineer or PM must fill out the new Bridge Web Based Application sheet to obtain the bridge estimate. In addition to the square foot cost, additional bridge modifiers are available to capture all the cost associated with a new bridge. There is also an area to enter Manual cost for a bridge as well.

Right of Way Worksheet

Right of Way project costs can be entered two ways in the PCES. The first avenue is to use the "Computed Costs" in the system. This method uses preset costs in the worksheet. The other method is to use "User Defined Costs". This method allows the user to enter the unit costs based on known or historic unit costs. When the preferred method is selected a "<" will show up on the right of side of the individual fields requiring data. These are also color-coded. The "User Defined Costs" symbol (<) is blue and the "Computed Costs" symbol (<) is green. Directions are provided below for each method.

When "Computed Costs" is chosen, the user still has many choices to make, as most fields are divided into values with a wide range. The user of the system must have a good working knowledge of the values they are choosing. The user cannot rely on PCES to give them a reasonable estimate without choosing the appropriate value ranges.

Whichever method selected look for the (<) symbol on the right side of the fields needing data to compute the estimate for that portion of the right of way estimate. Many of the fields require data regardless if "Computed Cost" or "User Defined Cost" is the selected method for computing the cost.

Select Project Area Real Estate Costs

The user has seven options from which to choose the most appropriate real estate cost. These options are very low, well below average, somewhat below average, average, somewhat above average, well above average, very high. The user is to select the option that best fits the overall cost for their particular district and project location.

Ready		

Define Project Land Use Characteristics

The user has four options in this category: Agricultural, Residential, Industrial, and Commercial. The user must select the percentage that best fits the amount of each zoning class of land impacted by the project. Each land use description has a drop-down menu to select the percentage to be applied to that particular land use. The percentages need to total 100% before the system will provide a total cost.

Select Computed or User Defined Costs

There is a drop-down menu for the user to choose the recommended cost process for the project. "Computed Cost" uses the cost associated with PCES and "User Defined Cost" allows the user to enter unit cost.

1. Land Value

The values for the items in blue need to be entered by the user (Proposed Right of Way, Temporary Easements, and Permanent & Utility Easements). This information will be used to determine the "Land Value" cost of the project. It is important for the user to complete the percentages on the right to total 100%; otherwise, system will not compute a "Land Value" cost. The drop-down menus for the existing and proposed right of way widths can be overridden. When using "User Defined" costs, the right of way user needs to enter a per square foot cost for the Proposed Right of Way, Temporary Easements, and Permanent & Utility Easements blocks. If no value is entered, no "Land Value" cost will be generated.

2. Building Value

When using "User Defined" cost in this category, the right of way user will need to enter two values, if applicable. In the "Estimator's Total Residential Dwelling Costs" field, the user is to enter the lump sum total residential relocations Costs for the entire project.

In the "Estimator's Total Commercial / Industrial Building Costs" field, the user is to enter the lump sum total commercial / industrial relocation cost for the entire project.

3. Other Improvements

Other improvements are any tangible items in the taking that are compensable, such as landscaping, trees, retaining walls, subdivision signs, other signs, outbuildings, walkways, parking areas, wells, water systems, etc. When "Computed Costs" is used in the Residential Building Value section, a figure will appear in the computed costs area for Other Improvements and this may be used or a user-defined figure may be substituted. If user defined cost is used in Residential Building Value, then user defined must be used under Other Improvements. Commercial/Industrial Building Value requires user defined, thus user defined must be used on Other Improvements.

Utilities Worksheet

The purpose for the Utilities worksheet is to allow the user to create a utilities estimate for the utilities being impacted or having anticipated impacts. The worksheet has been created to allow the user to enter data for typical utilities impacted by projects. Unusual utility costs should be manually entered into the worksheet in the miscellaneous boxes at the bottom of the appropriate utility (i.e. electric, telephone, CATV, water, sanitary sewer, natural gas/propane, and petroleum) and in the correct box related to the costs (construction vs. Right of Way charges) with the exceptions being Cellular and Additional Costs. Cellular and Additional Costs are to be entered

as lump sum cost as they relate to the project. It is recommended the user provide documentation of the unusual utility costs on the "Comments" worksheet.

Utility data can be entered two ways in the PCES. The first avenue is to use the "Computed Costs" in the system. This method uses pre-determined unit costs based on data entered into the worksheet. The other method is to use "User Defined Costs". This method allows the user to enter the unit costs based on known or historic unit costs. Directions are provided on the following pages for each method.

Because the worksheet has a similar set up for each type of utility, it will be easier to describe what is expected for each column (vertical). Any exceptions to this approach will be described in more detail.

Column 1 (Computed or User)

Two methods of developing a cost are available, "Computed" and "User". The user is to select how they want this particular utility cost computed by selecting the appropriate choice from the drop-down menu. To give the user more latitude, this worksheet has been developed to allow the user to use both methods of computing costs in the same utility section. For example the user may elect to use the "Computed" cost for wooden electrical transmission poles and the "User" cost for concrete/steel electrical transmission poles. The default is set for Computed.

Additional Costs

The user can add additional utility cost in the appropriate utility cost fields. These costs are to be cost that cannot be captured elsewhere on the utility worksheet. Be sure to add the additional cost in the appropriate fields so they will be computed correctly.

The utility subtotals for right of way cost, construction, and utility owner cost are all based on today's cost (no inflation applied), as is the Grand Total Utility Costs. The costs associated with each field will populate the appropriate fields in the other worksheets (i.e. utility cost associated with right of way will populate the utilities field of the right of way worksheet and utility cost for construction will populate the in-plan utilities field in the construction worksheet).

Comment Sheet

The comment sheet is provided for the users to provide documentation for any project related comments, estimate revision notes, comments related to unusual cost, large drainage structures, project descriptions, right of way and utility cost notes.

Anyone entering comments are requested to enter their name and section and the date entered so anyone viewing the workbook will see who provided the comments and when the comments were entered.

If additional lines are needed for the comment, continue to enter the comment in the same comment field. The field will expand.

Since the field will only show the first two lines in the comment field, the viewer can see all the comments in that field by either double-clicking the field with left mouse button or view the comment in the data entry field at the top of the worksheet.

The original comment sheet provides the user and viewer with 15 comment, name & section, and date fields. If additional fields are needed, please forward a copy of the PCES workbook to the PCES section. They will coordinate with the Information Technology Applications Division (ITAD) and return the workbook. Do not try to add more sheets.

Manual Worksheet

This allows a PM the ability to input a manual project estimate into PCES for projects that <u>can't</u> be developed from the construction, bridge, right of way and utility worksheets. This feature allows all project estimates to be captured in PCES.

The intent of the feature is not to just capture the total project estimate but to allow the user to enter estimates for each job number or phase AND to provide documentation as to how the estimates were developed. The documentation can be captured in different ways. First, each job number has a field to enter comments or documentation. Second, the user may elect to enter this information in the "Comments" worksheet. Last, if documentation has been created in a separate file, the user can upload the file through the PCES website under "Estimate Supporting Documents". If the last way is used, please provide the file name in the comment field so future users or people viewing the estimates can easily retrieve and view this document.

It is recommended the name of the user and the date be entered on the "Comments" worksheet for future reference.

	These fields will no
Note:	website. The user i

These fields will not automatically populate the job number breakdown on the vebsite. The user is still required to enter this information.

The first portion of the Manual worksheet shows data populated from other sources.

The user can enter the individual job information in the fields shown below (job number, phase, comment, and estimate). The worksheet can accommodate up to 18 different job numbers for a given project.

The data for the *job number* field is to be entered using four characters (i.e. P101, R201, C501, and B601).

The *phase* field has a pull down menu to allow the user to select the appropriate phase for the estimate (i.e. PE, RW, and CN).

The *comment* field will allow the user to enter comments related to the job number. The *estimate* field will allow the user to enter the dollar amount for the job number. Note: This information does not automatically populate the "split estimate" window on the PCES website.

The fields shown below are populated based on the information entered in the job number fields. The Ad Year fields will add all related phases together (PE, RW, and CN) to create a total for each phase. From that information a total project estimate will be created using the inflation factor, if applicable.

Appendix A - PCES Generated Project Costs

Bid Item Series	Description	Items Automatically Included in Lane Mile Cost or Calculated by PCES*	Excluded Items (costs must be added on CONST-MISC worksheet)
00000	Mobilization and Infrastructure	mobilization, surveying, clearing and grubbing, regular excavation, minor structure pipe excavation, geotextile fabric, select and backfill material, grading, bedding aggregate and erosion control stone, moderate shoulder widening, drop inlets, underdrains, drainage piping/associated work ≤ 60 " dia. and manholes/paved ditches on urban projects	excessive excavation, rock excavation, excessive select material, borrow, box culverts(excavation, bedding, concrete/steel, etc.), Class 20 concrete/reinforcing steel, A3 concrete, elliptical pipe, piping and associated work \geq 60" dia., and storm sewer work (drop inlets, manholes, paved ditches, underdrains, etc.) on rural projects
10000	Asphalt Paving	aggregates, sealcoating, liquid asphalt and asphalt concrete (full depth pavement items only)	overlay aggregate and asphalt (not full depth paving) and planing/milling
11000	Concrete Paving	entrances (urban projects only)	bridge approach slabs/reinforcing, saw cutting, shot blasting
13000	Incidental Items		Guardrail in excess of 5% of project length. and impact attenuators, permanent concrete barriers, retaining walls, soundwalls, detectable warning surfaces
14000	Removal		removal of concrete sidewalk, curb, gutter and paving items
22000	Fencing		fencing, bracing, gates
24000	Traffic Safety	allaying dust, barricades, signs, aggregate, channelizing devices, arrows, flagging, barrier service, truck mounted attenuators, warning lights	detours, law enforcement assistance

24400	Demolition and	obscuring roadway, pavement
	Adjustments	demo, guardrail removal and reuse,
		adjustments to existing
		infrastructure, removal of drainage
		structures

Bid Item Series	Description	Items Automatically Included in Lane Mile Cost or Calculated by PCES*	Excluded Items (costs must be added on CONST-MISC worksheet)
25000	Field Office/Contract Items	field office	schedule/updates Partnering
26000	RipRap		riprap (grouted and non-grouted)
27000	Environmental	seeding, fertilizer, lime, stabilization mat, protective covering, diversion channels, dewatering basins/excavation, siltation control/fencing, geotextile fabric, filter barriers, and stone	topsoil, cofferdams, stormwater management construction/items, well closings, landscaping items (trees, bushes, shrubs, flowers), mulch for plantings, wetland mitigation, removal of landscaping items, underground storage tank removal
40000	Water and Sewer	supply and sanitary lines (input LF next to dia. on UTIL worksheet)	valves, boxes, hydrants, meters, asbestos, line and equipment per/ft cost removal, asbestos-containing material removal and connections to, manholes, encasement piping (indicate cost on UTIL worksheet under additional costs for water and sewer)
	Additional Utility Services	(input items on UTIL worksheet)	
50000	Signage	permanent (vertical support) sign panels and construction signs, posts, bases. OH, counter lever and Bridge Mount (input on the Signals Tab)	
51000 and 52000	Signals	electronics, electrical services, concrete foundations, poles, cables, hanger assembly, installation, signal heads, Temporary Signals (input no of new and modified intersections on the Signals Tab.)	

54000	Pavement Marking	pavement markings	
56000	Lighting	lights, poles, foundations, electrical service, conduit, trenching, electronics	
70000	Misc.	Enter data/info on RW worksheet	All misc. clearing/demo items not
	Demolition/Clearing	If applicable to RW	covered by RW
Bid	Description	Items Automatically Included in	Excluded Items (costs must be
Item		Lane Mile Cost or	added on CONST-MISC
Series		Calculated by PCES*	worksheet)

□ Watch for excessive item quantities

Bid			Excluded Items (costs must be
Item		Web Based Bridge	added on MISC. COST as
Series	Description	Application SF Cost	applicable for each bridge)
60000	Bridges	Pre-cast and cast-in-place concrete (non-repair), deck grooving, temporary structures; expansion material, demolition/disposal of existing bridges (input length/width/), Structure-excavation, Piling (steel or pre-cast), Abutments, A3 concrete, re-bar (plain or epoxy), Approach Slabs, coffer dams, temporary work bridge, standard beams of steel or precast, joint work, standard railings. A-4 concrete deck drainage.	Cathodic ray protection, scour protection on existing structures, expansion joint removal, paint removal, stairways, observation posts, special or custom railings, operable bridges and all associated equipment work, rip rap, lighting, sound walls, painting, non-normal bridge features.
67900	N.S. Dismantling & remove exist. structure	Removal and disposal of all bridge elements to include deck piers, abutments, working over land including type B structures.	Environmental issues & permit work restrictions when working over water, access restrictions due to location, asbestos abatement, working over heavily trafficked roadway.

Appendix B – Summary of Changes from Version 2.1 to 2.3

PCES v2.3 Cost Factor Changes

The following cost factor changes have been made to the PCES Construction/PE/ Bridge worksheet. These factors will be in place when the PCES worksheet is downloaded from the PCES website. *In order for these factors to become effective, a new PCES worksheet should be downloaded from the system and saved.*

District Factors

District factors for the following districts have been increased. The rest will remain at their current factor. Fredericksburg remained the district used as the baseline.

- Salem
- Hampton Roads
- Culpeper
- Staunton

Flush Median

This option has been removed from the worksheet. If the project has a flush median, please treat it as an additional lane.

Interstate Cost Factors

These cost factors have been adjusted to increase the lane mile cost.

Surface Only and Surface Plus Cost Factors

These factors have been reduced to more closely match the data collected for Rural Rustic Roads projects. These factors should typically be applied to projects <u>not</u> using plant mix.

Lane Mile Cost Factors

These factors have been adjusted (increased) for all geometric standards to more closely reflect the data collected. This applies to projects with curb and gutter as well as shoulders. This also includes the additional lane cost factors.

Feature Cost Factors

The following features have been adjusted (increased).

- Raised Median
- Curb & Gutter
- Sidewalk
- Crossover
- Right Turn Lane

- Left Turn Lane
- New Signal Costs (2-lane and 4-lane)
- Adjust Existing Signal Costs (2-lane and 4-lane)

Appendix C – Summary of Changes from Version 2.3 to 2.4

PCES v.2.4 CHANGES TO THE WEBSITE

Search Page

• New expired estimate and SYP logic:

 Projects selected are in current LIVE or current working iSYP scenario (Programming Division to determine project category)

 Excludes district-wide

 and budget line items

 "Expired" definition expanded to include estimates older
 than 90 days old as well as estimates where expenditures exceed the estimates

- The reason for the expired status is now shown when you mouse over the estimate total column and is also shown on exported report.
- The exported listing no longer includes the "HR Planning" data. Instead, it now includes the estimate date, version and expiration reason.
- New numerical selection for searching

Project Information and Estimates

- Slightly different format
- Only the currently selected estimate is shown (click on "(+) Show All Estimates" just below "Estimate History" to show the estimates in phases).
- TRNS*PORT and RUMS estimates data has been compressed to take up less room (no change in data content).
- The "Pending Approval" section is hidden by default but will be displayed if there are pending estimates.
- The PD-1 process is now linked with the Project Pool (dependent on the release of the Pool- working feature may be delayed).

PCES v.2.4 CHANGES TO THE WORKBOOK Summary

Page

• The Advertisement and Estimate years now default to 2007

CONST-1 Page

□ The choices for "Total Length- Raised Median (ft.)" and "Number of Crossovers (Divided Highways ONLY)" are now always visible.

CONST-2 Page

- The choices for "Total Length- Raised Median (ft.)" and "Number of Crossovers (Divided Highways ONLY)" are now always visible.
- A box/text has been added so that the user may manually change the lane width (as on the CONST-1 Page).

Values and Cost Factors

• The lane mile values changed according to the following GS types:

GS-1	+3%
GS-2	+13%
GS-3	+3%
GS-4	+3%
GS-5	+13%
GS-6	+13%
GS-7	+3%
GS-8	+13%
Interstate	+23%

- New "Non-Construction" filter.
- All search filters are now visible (binoculars removed).
- New traffic signals and adjusted signal values increased by 3%.
- District cost factors are adjusted to the following:

Bristol	.85
Salem	.95
Lynchburg	.90
Richmond	1.05
Hampton Roads	1.20
Fredericksburg	1.00

Culpeper	1.00
Staunton	1.00
Northern Virginia	1.05

- The cost of left turn lanes increased by 13%.
- The default terrain was corrected to "Gently Rolling" and the following terrain factors are adjusted to the values indicated below:

Gently Rolling	0.00
Rolling	0.10
Light Mountainous	0.15

- Bridge removal costs increased by 3%
- The base value for the raised median is now \$37.44/LF.
- The base value for curb and gutter is now \$48.30/LF.
- The base value for a 4' sidewalk is now \$23.94/LF.
- The base value per crossover is now \$86,520 each.
- The base value per right turn lane is now \$43,260 each.
- The base bridge cost is now \$70,918 and \$105/SF.
- The bridge formula has been corrected to include the following values relative to the base cost of the bridge:

<\$500,000 additional \$25,750 and +5% \$500,000-

\$2,000,000 additional \$41,200 and +2%

>\$2,000,000 additional \$61,800 and +1%

Appendix D– Summary of Changes from Version 2.4 to 2.41

PCES v.2.41 CHANGES TO THE WEBSITE

1. Project Page – TRNS*PORT Estimate area modifications

- a. Error message conveyed/no TRNS*PORT estimate when UPC number is Embedded in more than one prime project number in TRNS*PORT
- b. Prime project number is displayed
- c. Date of last L&D estimate is displayed

- d. Bridge Construction and Road Construction work estimates are separated and subtotaled
- e. The categories for Contract Requirements, State Police, State Forces, and Railroad totals which mirror those in TRNS*PORT are now indicated

PCES v.2.41 CHANGES TO THE WORKBOOK

- 1. Version name was changed from 2.4 to 2.41
- 2. SUMMARY Worksheet Ad Year choices are now limited to the current fiscal year and beyond
- 3. SUMMARY Worksheet Estimate Year is now fixed to the current fiscal year
- 4. Inflation Rate 12.58% is the current compounded inflation rate for FY 2008. This % incorporates the 2007 rate. This was required to maintain the same dollar value of your estimate when the fiscal year changed. It is anticipated that, when new inflation rates are established by the Financial Division later this year, the 12.58% and any adjustments made to it will be absorbed into PCES' project workbook value tables and the inflation rate will be set to "0%" for the current fiscal year.

Appendix E– Summary of Changes from Version 2.41 to 2.5

PCES v.2.5 CHANGES TO THE WORKBOOK

- 1. All lane mile, bridge square foot, traffic signal and other related cost tables have been updated.
- 2. The cost for left turn lanes has been changed. The results will be that PCES will generate a lower cost for this feature.
- 3. The Construction Engineering (CE) cost table for roadways has been updated.
- 4. Inflation factors have been updated. Inflation will not be added to the cost estimate if it goes to advertisement in the current fiscal year, only for future fiscal years.
- 5. On the right of way sheets the range of values has been increased for residential and agricultural zoned property.
- 6. Also on the right of way sheet the range of allowable charges for damages and administrative settlements has been increased.
- 7. On the utility sheet, the system generated cost for overhead power lines and for sanitary sewer lines have been increased.
- 8. On the bridge sheet, the calculation for PE cost has been changed. PE cost will increase from that generated by the previous version of PCES.

Appendix F– Summary of Changes from Version 2.5 to 2.51

PCES v.2.51 CHANGES TO THE WORKBOOK

- 1. Version name changed from 2.5 to 2.51
- 2. Added Bike and Pedestrian facilities to the workbook on the Construction 1, Construction 2, and the Bridge sheets.

Appendix G Summary of Changes from Version 2.51 to 2.53

PCES v.2.53 CHANGES TO THE WORKBOOK

- 1. Version name changed from 2.51 to 2.53
- 2. The Construction End Year Validation message was added to the Summary worksheet.

Appendix H Summary of Changes from Version 2.53 to 2.6

PCES v.2.6 CHANGES TO THE WORKBOOK

- 1. Version name changed from 2.53 to 2.6
- 2. All lane mile, bridge square foot, traffic signal, curb and gutter, median, sidewalk, crossover, turn lane, utilities and other related cost tables have been updated.
- 3. The following District Cost Factors changed:
 - a. Bristol- from .85 to .90
 - b. Lynchburg- from .90 to 1.0
 - c. Hampton Roads- from 1.2 to 1.25
 - d. Culpeper- from 1.0 to 1.1
 - e. Staunton- from 1.0 to .95
 - f. Northern Virginia- from 1.05 to 1.2
- 4. Inflation factors were updated.

Appendix I Summary of Changes from Version 2.6 to 2.61

PCES v.2.61 CHANGES TO THE WORKBOOK

- 1. Version name changed from 2.6 to 2.61
- 2. Added Traffic Tab worksheet
- 3. Eliminated New and Modified signal boxes from Construction 1.
Appendix J Summary of Changes from Version 2.61 to 2.62

PCES v.2.62 CHANGES TO THE WORKBOOK

- 1. Version name changed from 2.61 to 2.62
- 2. Due to the current bidding climate/reduction in costs for numerous bid items, the 4.2% inflation for projected for FY2010 has not been "absorbed" into PCES' construction value. The summary of changes to each estimate phase from v2.61 to v2.62 is as follows:

PE Estimate

- A. PCES-generated will change if CN estimate has changed
- **B.** Manual no change

RW Estimate

- **A.** PCES-generated will change only if costs from the Utilities worksheet are charged to RW instead of CN
- **B.** RUMS extraction no change
- **C.** Manual no change

CN Estimate

- A. PCES-generated an approximate 4.2% decrease
- B. TRNS*PORT-generated estimate no change
- C. Manual no change

Appendix K Summary of Changes from Version 2.62 to 2.7

PCES v.2.62 CHANGES TO THE WORKBOOK

- 1. Version name changed from 2.62 to 2.7
- 2. The statewide cost of building a GS-5 standard roadway was reduced by 10%
- 3. The following District Cost Factors changed
- A. Bristol from .90 to .95
- B. Salem from .95 to .90
- C. Hampton Roads from 1.25 to 1.10
- D. Culpeper from 1.10 to .90

- E. Staunton from .95 to .90
- 4. The cost of water line generated on the utilities tab was reduced by 14%
- 5. Inflation factors were updated.

Appendix L Summary of Changes from Version 2.7 to 2.91

PCES v2.7-2.91

- 1. Versions 2.7-2.91 dealt with inflation costs in July 1, and December 1 of the fiscal year
- 2. July updates reflected the addition of any cost to the PCES base if the December inflation called for inflation during the ad year.

Appendix M Summary of Changes from Version 2.91 to 2.94

PCES v2.93 (November 1, 2012)

- 1. Version name changed from v2.91 to v2.93.
- 2. Added a tab to the Constr. 1 sheet that will allow a Project Manager to choose if a project is a Maintenance project (such as regional guardrail, overlay, typically projects that are in the system for a short time before they are advertised) it would not add inflation to a project if the estimate and the project ad were in the same year. These projects usually have a set amount of money and inflation would not be calculated. (v. 2.92)
- 3. Revised the Bridge sheet to allow a space to write in the Federal Structure I.D. Number. Also added three additional areas to write in comments for Misc. Cost, CE, and PE. (v 2.93)
- 4. Revised 2.93 to 2.94 to reflect new inflation factors. (December 2012)

Appendix N Summary of Changes from Version 2.94 to 3.1

PCES v2.94 (July 1, 2013 and Dec. 1, 2013)

- 1. Version name changed from v2.94 to v3.0.
- 2. Added inflation to base cost factors. (July 1, 2013)
- 3. Revised 3.0 to 3.1 to reflect new inflation factors. (December 2013)

Appendix O Summary of Changes from Version 3.1 to 4.1

PCES v3.0 (July 1, 2014 and Dec. 1, 2014)

- 1. Version name changed from v3.1 to v4.1.
- 2. Added inflation to base cost factors. (July 1, 2014)
- 3. Revised 4.0 to 4.1 to reflect new inflation factors. (December 2014)

Appendix P Summary of Changes from Version 4.1 to 5.0

PCES v5.0 (July 1,2015)

- 1. Version name changed from v4.1 to v5.0.
- 2. Added inflation to base cost factors. (July 1, 2015)
- 3. Revised 4.1 to 5.0 to Add Bridge Estimate Sheet.
- 4. Revised Bridge Tab.
- 5. Revised PCES Web site to include download of Bridge Estimate Sheet.

Appendix Q Summary of Changes from Version 5.0 to 6.0

PCES v6.0 (January 1, 2016)

- 1. Version name changed from v5.0 to v6.0.
- 2. Updated inflation factors for FY 16'. (October 1, 2015- December 31, 2015)
- 3. Revised Geometric Standards Base costs for GS-3, GS-¹², GS-³⁴, and GS-⁵

- $^{\rm 2}$. GS-4 was increased by 5%
- $^{\scriptscriptstyle 3}$. GS-6 was increased by 10%
- $^{\scriptscriptstyle 4}$. GS-8 was increased by 10%
- $^{\rm 5}$. The District cost factor was increased by 10% for Richmond and Culpeper

¹. GS-3 was increased by 10%

Appendix R Summary of Changes from Version 6.0 to 6.1

PCES v6.1 (July 1, 2016)

- 1. Version name changed from v6.0 to v6.1.
- 2. Added inflation to base cost. (July 1, 2016)
- 3. Removed Bridge tab from Workbook
- 4. Added web based bridge application
- 5. Updated PCES web page to reflect bridge application addition

Appendix S Summary of Changes from Version 6.1 to 6.2

PCES v6.2 (January 1, 2017)

- 1. Version name changed from v6.1 to v6.2.
- 2. Updated Inflation Factors for FY 17' (October 1, 2016 December 31, 2016)

Appendix T Summary of Changes from Version 6.2 to 7.0

PCES v7.0 (July 1, 2017)

- 1. Version name changed from v6.2 to v7.0.
- 2. Added Inflation to base cost for FY 18' (July 1, 2017)

Appendix U Summary of Changes from Version 7.0 to 7.1

PCES v7.1 (January 1, 2018)

- 1. Version name changed from v7.0 to v7.1.
- 2. Updated Inflation Factors for FY 17' (October 1, 2017 December 31, 2017)
- 3. Updated the PCES User Guide
